

We have created an educational video to assist you and your staff in the proper donning and doffing of PPE when transporting a rule out or confirmed COVID 19 patient. Please remember you MUST perform hand hygiene before donning your PPE. Also attached is a guideline on the latest recommendations by LVHN Infectious Control on PPE selection for EMS providers. You will see noted in the document that we are requesting all patients whether COVID rule out or not to have a surgical mask on. Nursing staff has been instructed to replace this surgical mask to your providers. If they were to encounter any issues with this please have them reach out to the charge nurse.

Video link: <https://youtu.be/qn5-Zbwbf5A>

Please review both with your infectious control officer. If you have any questions please don't hesitate to reach out.
